Retail Billing & Inventory Software

Billing software designed to meet billing of purchase and sales of goods which is very convenient and reliable, it produce invoice sales as well as purchase. In every sales or purchase of goods it tracks the payment logs of customer, so it easy to track pending balance. It also saves time while adding products, instead of adding product one by one , you can have provision for upload bulk products through excel. Discount provision available for order management. Different report are available to track every order and purchase, also tracks all GST data.

It also facilitates generating barcode for all different products which is automatic and manual. Create your own barcode for products and make fast processing of billing through barcode scanner, at same software facilitates product selection through barcode and key press selection and results in fast and reliable order processing of customers. Shortcut key saves times for fast billing and processing throughout software.
